

Porsche 964/993 Climate Control Unit pushbutton stickers

No more worn-off CCU switch logos!

BERGVILL F/X CCU switch stickers are made of durable vinyl with a laminated coating that stands up against heat, cleaning and most solvents. The sticker adhesive allows for easy application and a lasting result. The stickers are translucent, allowing for backlight illumination.

Use a tool to remove any remaining black coating on the switch, leaving the round white area. Degrease the surface with mild solvent or alcohol using a Q-Tip or similar application tool.

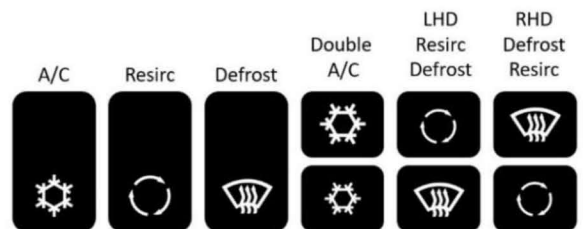

Slightly bend the carrier sheet, and use the corner of a clean sharp knife to lift the sticker from the sheet. Position the sticker over the white area, and hold it with a finger. Pull out the knife, and press to fix.

The stickers are produced with a silk matte finish, but they may appear a bit shinier than rest of the surface of the switches. To obtain a more matte finish, you can use 1000-Grit sand paper and very carefully sand the surface of the stickers. Be careful not to sand too deep and damage the laminated coating.

Here's an overview of CCU front panel switch variants, and how the logos shall be positioned.

LHD CCU variants have the single-switch logos at the bottom of the switch, RHD at the top.
