

Porsche 997/987 DSC Sport Controller Installation

Congratulations on your purchase of the DSC Sport controller!

The following instructions will assist you through your installation process. Please read them first **BEFORE** beginning the install and familiarize yourself with the steps and tools needed. If you feel that you cannot properly perform this installation, we **HIGHLY** recommend you take the vehicle to a qualified and experienced automotive technician.

What's Included

- DSC Sport controller
- Mini USB tuning cable

Installation Tools

- No tools required

STEP 1. Ensure the vehicle's ignition is **OFF** before starting the installation.

STEP 2. Locate the stock PASM module. It is located above and slightly forward of the carpeted trim panel nearest to the passenger's right foot. There's no need to remove the trim panel. Just reach your hand above the trim panel then slight forward and you'll feel the flat surface of the PASM module.

STEP 3. Once you have your fingers on the flat surface of the PASM module, follow downward and you'll feel the plastic locking tab. Gently push down on the locking tab and the PASM module will fall out of the retaining bracket.

STEP 4. Carefully unplug the electrical connector from the PASM module and transfer the connector to the DSC module. Make sure the connector is plugged in all the way and is secured.

STEP 5. To install the DSC module onto the retaining bracket simply line up the upper tab and the bottom will snap into the locking tab.

STEP 6. Done! Enjoy your new DSC Sport controller.
